

What this file contains:

Table 5a: Monthly count of Meticillin Resistant *Staphylococcus aureus* (MRSA) bacteraemia from November 2015 to November 2016 by NHS Trust (see below).

What this data shows:

A monthly count of total reported, Trust assigned and CCG assigned MRSA bacteraemia by NHS acute Trust. A further column detailing those cases reported by the Trust that were deemed to be third party cases is also included.

Please note cases are published based upon their assignment at the time of extraction regardless of whether Post Infection Review (PIR) status has been finalised. 31% of cases for the month of November were finalised by the time of data extraction. Changes and updates to the data after this date will be reflected in the next publication.

What this data does not provide:

A basis for decisions on the clinical effectiveness of infection control interventions in individual Trusts: further investigations considering potential confounders would need to be undertaken before this could be done.

A basis for comparisons between Trusts. The counts of infections have not been adjusted to give a standardised rate considering factors such as the hospital demographics or case mix.

Assignment of cases

All MRSA bacteraemia cases reported via the HCAI Data Capture System (DCS) are assigned to either an acute Trust, a CCG or a third party through the completion of a Post Infection Review (PIR).

A case is deemed to be **Trust assigned** where the completed PIR indicates that an acute Trust is the organisation best placed to ensure that any lessons learned are actioned.

Please note the number of cases **assigned** to an acute Trust under the PIR process may differ from the number of cases that would previously have been deemed to be acute Trust cases under the previous **Trust apportionment** algorithm. This change reflects a change in reporting methodology rather than any change in Trust performance.

A case is deemed to be **CCG assigned** where the completed PIR indicates that a CCG is the organisation best placed to ensure that any lessons learned are actioned.

At the beginning of the 2014 financial year NHS England introduced a new category for the PIR assignment of MRSA bacteraemia cases, acknowledging the increasingly complex nature of the MRSA bacteraemia being reported. Assignment to a "third party" through the arbitration process can now be made for cases with a specimen date post April 2014.

The "**third party**" option provides a category for patients who have been attributed to default providers or CCGs who may not have been involved in the patients care or who can provide strong evidence following a PIR that there were no failings in patient care.

Please note although third party cases are listed against the acute Trust that initially reported the case, the reporting Trust is not deemed to be the finally assigned organisation in terms of PIR outcome.

Further information on the PIR process can be found on the following webpage: <http://www.england.nhs.uk/ourwork/patientsafety/zero-tolerance/>

Data source

Data were extracted from the PHE's data capture system on 16th December 2016.

Data are collected at Trust level.

Data are reported for 154 NHS acute Trusts in England.

Cases are reported by the Trust whose laboratory processes the specimen, which may not always reflect where the MRSA bacteraemia was acquired.

Data Changes

The nature of the data collection means that NHS acute Trusts are able to request updates to their data at any time.

Further information on the process necessary for an acute Trust to request such changes can be found here:

https://hcaidcs.phe.org.uk/ContentManagement/LinksAndAnnouncements/HCAIDCS_System_Administration%20Unlock_Requests_UserGuide_V2.0.pdf

Further information on the Data Specific Revisions & corrections Policy can be found here:

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/509316/HCAI_Mandatory_Surveillance_Data_Specific_Revisions_and_Corrections_Policy_March_2016.pdf

This process means that there are frequently minor changes/additions to the most recent three data months in future publications. Affected data months are italicised in the data table to indicate where such revisions may occur. Any changes and updates to infection counts since the previous monthly publication outside of the italicised data periods are coloured red.

Trust sign off

All NHS acute Trusts Chief Executives are required to sign off their MRSA bacteraemia data for a given month on the 15th of the following month. Sign off is used to ensure the quality and accuracy of submitted data. Failure to sign off can be indicative of missing data and/or an associated data quality problem.

Further information

Further information on the underlying epidemiology and associated demographic information can be found here:

* Total cases - total number of acute Trust reported cases

**Trust assigned - cases assigned to an acute Trust as a result of the Post Infection Review (PIR) process - see caveats page for more details

***CCG assigned - cases assigned to a CCG as a result of the Post Infection Review (PIR) process

**** Third Party - cases assigned to a third party organisation as a result of the Post Infection Review (PIR) process

Italicised figures indicate data from months that are likely to be subject to minor change or update in the future monthly publications.

Data cells with red numbers indicate that these figures have been amended since the previous monthly publication.

Acute Trust are highlighted in grey where they have failed to sign off their data for three months or more. Failure to sign off may be indicative of missing data and/or a data quality issues.
